Abstract

It is really magic and interesting that a "ω" Shape Giant Dragon of more than 88 thousand kilometers long is covered by the ocean clothes of the planet Earth. Its head is located at the Northwestern Pacific Ocean floor decorated with the unique geological age distribution of clam shell shape showing a hint meaning of Black Hole in the universe. Its body of cracking ridge is wriggling through the Southeastern Pacific Ocean Indian Ocean and Atlantic Ocean and its tail is located at the Arctic Ocean floor.

Similar to the natural childbirth of human baby from head to foot, the "ω" Shape Giant Dragon was born with its head formed by the sunk into the ocean floor of the biggest ancient plate (ancient Jiazhou plate) on the equatorial area broken apart from the unique supercontinent about 66 Ma ago. Then its body of cracking ridge was gradually assembled by the broke away of the residual ancient plates. Until its tail was formed on the Arctic Ocean floor millions of years ago, a whole smooth "ω" Shape Giant Dragon came into being on the planet Earth and had been lurking on the ocean floor all the time.

It took more than 60 Ma for the "ω" Shape Giant Dragon to be born on the planet Earth. Its head had been rotating anticlockwise passively and drifting from lower latitude to the higher one of the North Hemisphere at a speed of as slow as a snail moves. The destination for the wriggling of the "ω" Shape Giant Dragon would be the North Pole for the next 100 Ma in the future. So, the lifespan of the "ω" Shape Giant Dragon would be 166 Ma or so.

Keywords: "ω" Shape Giant Dragon; supercontinent; the Cross "+" shape Ocean-Plate Whirlpool; HBH (Hint Black Hole); Chinese Spring Festival; 12 animals revolving of Chinese Zodiac.

Introduction

What is it symbolized for the cracking ridge wriggling through the Southeastern Pacific Ocean, Indian Ocean and Atlantic Ocean on earth? What is the hint meaning of the unique geological age distribution of clam shell shape on the Northwestern Pacific Ocean floor?

The answer seems simple to combine the outline of the ocean floor globally and Chinese traditional culture of dragon. Since the geological age distribution of clam shell shape on the Northwestern Pacific Ocean floor shows the hint meaning of the Black Hole in the universe and it also symbolizes the eye of the "ω" Shape Giant Dragon of cracking ridge wriggling through the Pacific Ocean Indian Ocean and Atlantic Ocean, with its tail being located at the Arctic Ocean floor.

So, the questions about the "ω" Shape Giant Dragon are being raised naturally. When, where and how was it born? It had been wriggling on the ocean floor for almost 66 Ma, then where is the destination ultimately? How long is the lifespan of the "ω" Shape Giant Dragon? And what does it mean to the human race and other species wondering on the landmass of the Earth?

Text

1.0 The "ω" Shape Giant Dragon of cracking ridge lurking on the ocean floor of the planet Earth.

It is shown by Figure 1 as follows,

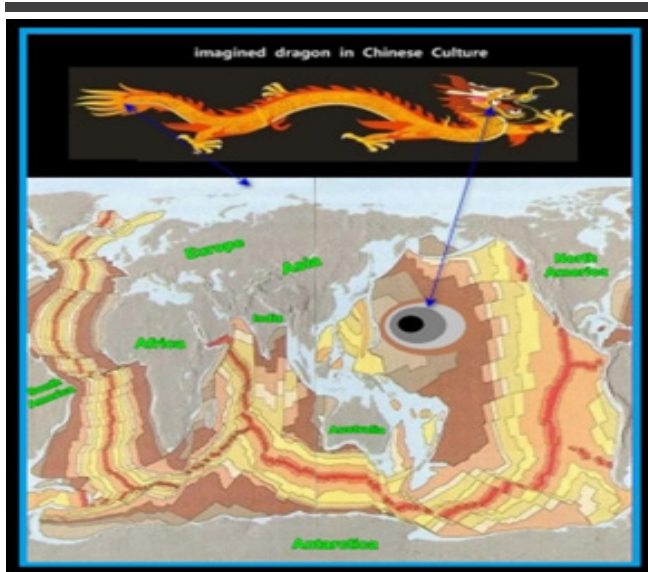

Figure 1: The "ω" Shape Giant Dragon of cracking ridge lurking on the ocean floor.

The "ω" Shape Giant Dragon of cracking ridge is lurking on the ocean floor with its head lying on the Northwestern Pacific Ocean floor and its tail lying on the Arctic Ocean floor. Its body of cracking ridge is wriggling through the Southeastern Pacific Ocean, the Indian Ocean, and the Atlantic Ocean. It seems like the "dragon eye" by the geological age distribution of clam shell shape on the Northwestern Pacific Ocean floor showing a hint meaning of Black Hole in the universe.

The birth and evolving of the "ω" Shape Giant Dragon may be concluded as following clues:

- The birth of its head by the differential mutation.
- The head of the "ω" Shape Giant Dragon was formed by the sunk to the ocean floor of the biggest ancient plate (ancient Jiazhou plate) broke apart from the unique supercontinent instantaneously at the equatorial area about 66 Ma ago.
- The birth of its body and tail by the integral gradient.
- It took more than 60 Ma for the assembling of its body of cracking ridge by the broke away of ancient plates, especially between the ancient South American plate and the ancient African plate, until the formation of its tail on the Arctic Ocean floor millions of years ago.
- The geological age distribution of clam shell shape was gradually formed by the upwelling mantle magma covered on the surface of the ancient Jiazhou plate on the Northwestern Pacific Ocean floor from -66 Ma to -35 Ma or so.

The head of the "ω" Shape Giant Dragon had been wriggling from the birth place of equatorial area to the higher latitude of the North Hemisphere by the state of rotating anticlockwise passively and drifting northwards in the past 66 Ma. Obviously, its destination would be the North Pole until its end of life in the

next 100 Ma or so.

It is no doubt that the birth and evolving of the "ω" Shape Giant Dragon would be single direction from equatorial to the North Pole and unique on the planet Earth. It would not happen for the recycling existence and evolving of the Giant Dragon at any time on the whole life of the planet Earth.

2.0 The logical reasoning of the existence of the ancient Jiazhou plate in the jigsaw recovery of the unique supercontinent 66 Ma ago.

In the distribution of the ancient plates nowadays on the planet Earth, the ancient Asian plate is certainly the biggest in area. However, the English word "Asia" means the second in rank sequence in Chinese meaning. So, there must be another ancient plate bigger than the ancient Asian plate and ranked as number One or Champion ancient plate in the jigsaw recovery of the unique supercontinent 66 Ma ago. And it could only be discovered on the ocean floor of the Northwestern Pacific Ocean by logical reasoning. It is coded as "X1" which means the unknown puzzle to human race once ever and named as "ancient Jiazhou plate" in Chinese which means the ancient Champion plate, or the biggest ancient plate existed in the jigsaw recovery of the unique supercontinent 66 Ma ago. It is shown by Figure 2 as follows,

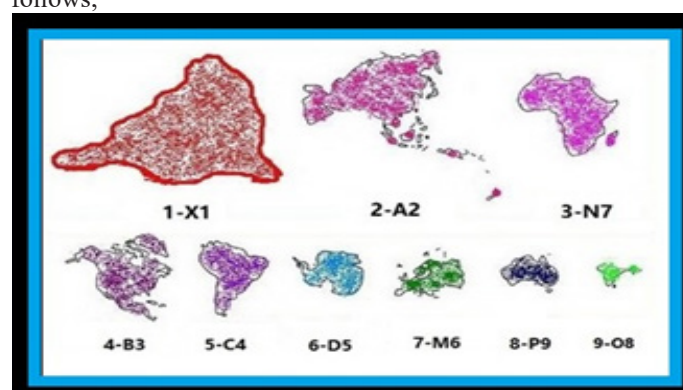

Figure 2: The ancient plates group led by ancient Jiazhou plate in the jigsaw recovery of the unique supercontinent 66 Ma ago.

3.0 The HBH (Hint Black Hole) hinted by the motive trend of lithosphere globally.

It is reasonable to deduce that the central core is located at the ocean floor of the Northwestern Pacific Ocean from the actual observation of the motive trend of lithosphere globally by professional institutions of geoscience. Combined with the geological age distribution of clam shell shape on the area, it may be concluded naturally as following that a Hint Black Hole (HBH) had been located on there for tens of millions of years.

The HBH (Hint Black Hole) is shown by Figure 3 as follows,

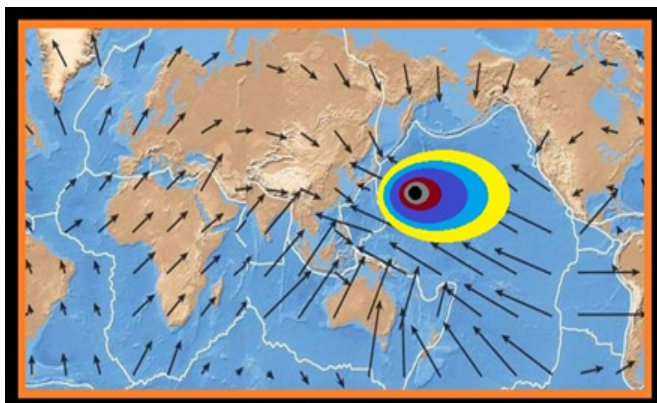

Figure 3: The HBH (Hint Black Hole) hinted by the motive trend of lithosphere globally.

4.0 The Cross "+" "Shape Ocean-Plate Whirlpool" rotating anticlockwise on the head of the "ω" Shape Giant Dragon.

It was about 66 Ma ago when the unique supercontinent was broke up which led to the born of "ω" Shape Giant Dragon with its head formed by the sunk of the biggest ancient plate (the ancient Jiazhou plate) into the ocean floor, and at the same time the born of the Cross "+" shape Ocean-Plate Whirlpool formed by the ancient plates and oceans. However, both of the invisible Giant Dragon and the visible Ocean-Plate Whirlpool had been sharing the same central core, which is the HBH (Hint Black Hole) hidden on the ocean floor of the Northwestern Pacific Ocean. It sounds very reasonable that the visible Ocean-Plate Whirlpool could be seen as the disguising clothes of the invisible Giant Dragon. That is the most magic and miraculous part of evolving of the planet Earth.

The Cross "+" "Shape Ocean-Plate Whirlpool" is shown by Figure 4 as follows,

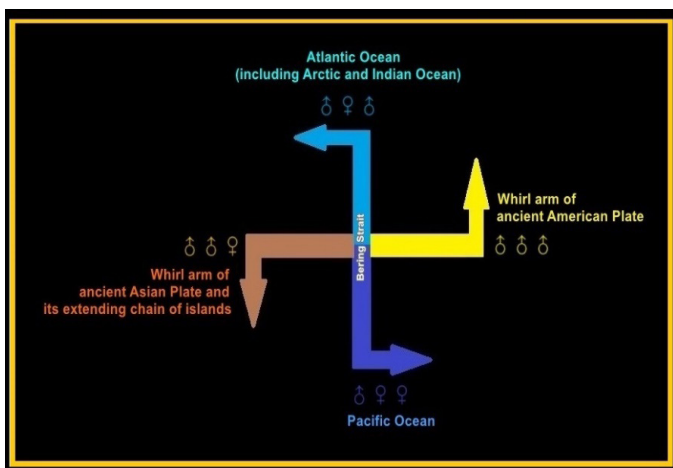

Figure 4: The Cross "+" "Shape Ocean-Plate Whirlpool" of double whirl arms of the planet Earth.

5.0 The meaning of the broke up of the unique supercontinent 66 Ma ago.

It may be concluded that it was not meaningless or by occasion for the broke up the unique supercontinent 66 Ma ago on which the invisible Giant Dragon and the visible Ocean-Plate Whirlpool were born based. In other words, it is the born of the Pacific Ocean in the middle of the unique supercontinent on the equatorial area 66 Ma ago that led to the come into being of the brilliant vision nowadays.

The unique supercontinent 66 Ma ago is shown by Figure 5 as follows,

Figure 5: the unique supercontinent surrounded by the Ancient Atlantic Ocean 66 Ma ago.

6.0 The dragon in the 12 animals revolving of Chinese Zodiac.

In the 12 animals revolving of Chinese Zodiac, except the Dragon, the other 11 animals could be seen or even be touched in actual lives of human being. In the Chinese traditional culture of more than 5000 years, the Dragon had been regarded as a kind of virtual or imagined animal in the brainstorm of Chinese people all the way. Yet, Chinese nation had been proud of descendants of the dragon which hint the closely connection between human being and the dragon.

The beginning of 2024 would meet the Chinese New Year of Dragon and the Chinese Spring Festival has been confirmed to be the UN Holiday, several days before the Christmas of 2023.

the 12 animals revolving of Chinese Zodiac is shown by Figure 6 as follows,

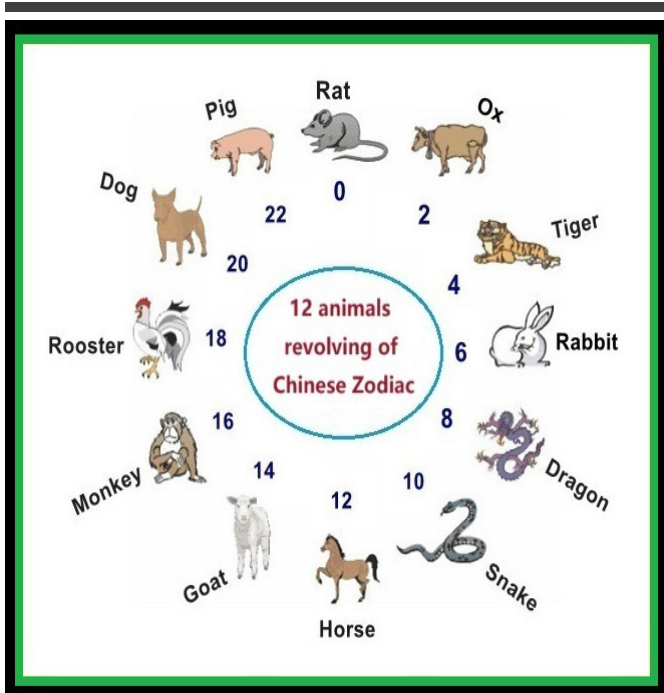

Figure 6: The 12 animals revolving of Chinese Zodiac.

Conclusion

The dragon should not be considered a legend story any longer since the “ω” Shape Giant Dragon of cracking ridge would be confirmed lurking on the ocean floor of the planet Earth. It took more than 60 Ma for the “ω” Shape Giant Dragon came into being as a whole from head to tail by the evolving of combined the differential mutation and the integral gradient process together. the “ω” Shape Giant Dragon had been wriggling northwards silently on the ocean floor disguised by the Cross “+” shape Ocean-Plate Whirlpool rotating anticlockwise and drifting northwards. The destination of the “ω” Shape Giant Dragon would be the North Pole in the next 100 Ma and it would disappear there on the planet Earth. The lifespan of the “ω” Shape Giant Dragon would be about 166 Ma. Obviously, it is a single incident in large probability and could not happen repeatedly on the planet Earth.

Discussion

1. What is the body language of the invisible “ω” Shape Giant Dragon of cracking ridge lurking on the ocean floor of the planet Earth?

Earthquake and volcanic eruption, especially the Pacific Ring of Fire, are the indirect body language hinted by the invisible “ω” Shape Giant Dragon of cracking ridge that it had been wriggling northwards all the time in the past 66 Ma while lurking on the ocean floor.

2. What is the meaning of the broke up of the unique supercontinent 66 Ma ago?

It was the broke up of the unique supercontinent 66 Ma ago which led to the born and assembling of the invisible “ω” Shape Giant Dragon lurking on the ocean floor and the born of the visible Cross “+” shape Ocean-Plate Whirlpool on which human

race could establish base camp and take ventures by wondering around nowadays.

3. How to distinguish the body language and the profound meaning or hint meaning of the outline sculpt of the ocean floor of the planet Earth?

It seems like the story of “the elephant touched by six blind men”. The hint meaning of the outline sculpt of the ocean floor seems to be sculpted in the genes of human race and reflected in traditional culture of human life, such as the Chinese New Year of Dragon for 2024 and the booming influence of Chinese Spring Festival.

4. Could the global ocean floor be treated the same as the landmass of ancient plates?

It is a different meaning hinted by the global ocean floor covered by ocean clothes. It would make a mistake of mixing the eyebrow and moustache together if the global ocean floor is treated the same as the landmass and get even confused or misleading about what happened once ever or what is happening nowadays and what would happen in the future on the planet Earth.

5. What is the relationship between human race and the “ω” Shape Giant Dragon lurking on the ocean floor?

Obviously, it sounds reasonable that human race and other species wondering on the landmass of the planet Earth would not exist without the born and evolving of the “ω” Shape Giant Dragon lurking on the ocean floor nowadays. The existing meaning of the “ω” Shape Giant Dragon to human race might be beyond the imagination of human beings.

6. Is it interesting and beyond expectation that the head of the “ω” Shape Giant Dragon formed by the biggest ancient plate (ancient Jiazhou plate) would become the last part of its whole body to be disclosed and studied by human race?

It is a really interesting and incredible thing that the mystery of the head of the “ω” Shape Giant Dragon would become the last part of its whole body to be unveiled and explored by human race. In other words, in the ancient plates group broken up from the unique supercontinent 66 Ma ago, the biggest or the champion ancient plate (ancient Jiazhou plate), the most part of which hidden in the ocean floor of the Northwestern Pacific Ocean, would be the last one to be accepted and convinced by the scientific circle, especially the mainstream academic of geoscience community. Perhaps that would be the helpless choice of fate of human beings.

7. What is the body language embodied by the relationship between the ocean and the “ω” Shape Giant Dragon lurking on the ocean floor globally?

The ocean just seems like the soften cotton quilt which had been covering the “ω” Shape Giant Dragon lurking on the ocean floor globally from head to tail for almost 66 Ma. A hint meaning

could be concluded from the relationship between the ocean and the "ω" Shape Giant Dragon lurking on the ocean floor globally that the latter could not be naked and meet the light of the Sun or it would disappear at once on the crust of the planet Earth forever.
